Senior Data Engineer | Snowflake & Tableau Expert | 5+ Years Driving Data Platform Performance

Professional Summary

Senior Data Engineer with 5+ years of experience building Snowflake Extract, Transform, Load (ETL) pipelines and Tableau analytics for a global enterprise client. Skilled in incremental loading, Snowflake-to-SingleStore dual-serving architectures with sub-second query performance, data validation, and executive dashboards for 500+ users, plus Tableau Server administration at 99.7% uptime.

Experience

Senior Associate Consultant, Infosys – **Client:** Apple Inc. Sep 2021 – Present

Project 1 – **Role:** Snowflake Data Engineer

- Designed and maintained an end-to-end retail performance data pipeline in Snowflake using batch and incremental loading, **supporting near-real-time dashboard refresh** across global retail locations.
- Implemented incremental load patterns for new and changed records, **reducing data latency** and avoiding full-table scans on high-volume transaction data.
- Built export jobs and loader utilities syncing curated Snowflake datasets into SingleStore, **enabling sub-second query performance** for an interactive web application.
- Architected a dual-serving layer with Snowflake as the single source of truth: Tableau queried Snowflake directly, while scheduled loads pushed denormalized snapshots into SingleStore for **high-concurrency access**.

Project 2 – **Role:** Tableau Business Intelligence (BI) Developer and Server Administrator

- Delivered 25+ executive Tableau dashboards serving 500+ daily active users via Level of Detail (LOD) calculations and dynamic filters, **driving a 20% reduction** in reporting turnaround time.
- Reduced Tableau report load times through query optimization and extract scheduling, **improving end-user satisfaction scores by 35%** and cutting load times by 50%.
- Established rigorous data validation frameworks across ETL stages, maintaining zero critical data incidents for 12 consecutive months.
- Translated Key Performance Indicator (KPI) requirements into visual narratives, **compressing insight-to-decision cycle from 5 days to same-day**.
- Administered Tableau Server for 300+ users – Active Directory (AD) group provisioning, permission governance, extract scheduling – **achieving 99.7% uptime**.

Skills

- **Cloud & Data Platforms:** Snowflake, SingleStore (MemSQL), GitHub
- **BI & Visualization:** Tableau Desktop, Tableau Server (Admin), Power BI, ATS Dashboards
- **Languages & Query:** SQL (Advanced – window functions, CTEs, query optimization, LOD expressions)
- **Data Engineering:** ETL/ELT Pipeline Design, Data Modeling, Bulk Load/Unload, Time Travel, Zero-Copy Cloning
- **Client Tools & CRMs:** Keystone, Devex, Snowcat, DataDoor, DAG, CRM Platforms
- **Soft Skills:** Technical Leadership, Executive Stakeholder Communication, Public Speaking, Team Mentoring

Certifications

- Claude Certified Developer – Foundations (Anthropic, Oct 2026)
- Deploy Gemini Enterprise with Workspace Data and Model Armor (Google Cloud, Sep 2026)

Education

Dr. B.C. Roy Engineering College – B.Tech in Computer Science 2017 – 2021
